

Comfort and power for perfect suction

FS100-120

suitable for removing the most stubborn dirt from outdoor or indoor surfaces, such as compartment stores and parking lots up to more than 10.000 sq.m/h

fully equipped sweeping machines in all respects

They come with all accessories as standard equipment:

spring seat with armrests, flasher, headlights, rubber bumper, reverse beeper, cloth filter, main and side brush.

 The front dirt hopper, with a capacity of 400 l. (FS100), 420 l. (FS120), is lifted by a two-piston hydraulic system that is directly controlled from the driver's seat. Vacuum is generated by a hydraulic motor

> 1,5 m dumping height

FIMAP

they have been devised to provide excellent driving comfort for the operator

The FS100-120 sweeping machines have been designed to ensure comfortable driving conditions for the operator. They have been carefully designed in every detail: the driver's seat is accessible from both sides and the elegant instrument panel ensures constant control of the situation.

FS100-120 also feature an electric filter shaker that is directly controlled from a button on the instrument panel to keep the pocket filter always clean

- The four main control levers have been arranged to make driving as easy as possible. The levers have the following functions:
- To switch on and lower the main brush and make suction start automatically. Depending on requirements, suction can be disabled.
- 2. To operate the side brush.
- 3. Lever to open and close the cover of the debris hopper.
- 4. Lever for dirt hopper lifting

 A comfortable step provides easy access to the driver's seat

• The drive pedal is servo-assisted to ensure smooth and precise driving

Thanks to their excellent accessibility, ordinary maintenance procedures are simple and fast

 The FS100-120 sweeping machines have been designed to provide the best accessibility to the motor compartment. Thanks to its accurate design, any type of ordinary and extraordinary maintenance procedure on the machine can be easily performed without any trouble. Oil level checking or filter replacement, for instance, have become extremely easy on the motor-driven version

 The pocket filter made of fabric with more than 10 sq.m. filtering surface, ensures long life and excellent results even in environments with very high fine dust content. The filter can be easily removed for cleaning without requiring any tools

 The cooler, with independent electric fan thermostat, and the cartridge filter come as standard equipment. Thanks to these two elements, best cleaning performance and constant oil temperature are guaranteed which are the two basic conditions to ensure long-term performance and reliability.

Their position has been studied to facilitate maintenance procedures as much as possible

 The back cover can be fully opened so to ensure complete accessibility to the battery compartment. The box accommodating the directional control valves is positioned in the central area so that easy and quick check of the battery liquid level in all elements is ensured

FS100-120 designed to ensure safety and reliability under any operating condition

The pressure and the height adjustment of the central broom are independent. A particular hydraulic device ensures constant weight on the broom. The broom can be easily adjusted according to the wear. This operation guarantees a long life to the broom

 The side brush is retractable to absorb accidental impacts and prevent any possible damage

 Traction is provided by the rear-drive wheel which ensures great manoeuvrability and safe driving with a very tight turning angle

The floating main brush is self-adjusting to maintain constant contact with the floor. Both brushes can be easily removed for replacement, and the main one, in particular, can be removed without any tools

the most powerful sweeping machines in the Fimap range

FS100-120 have been designed to easily collect solid debris and light dust.

These sweeping machines are at the top of the range in terms of power, performance capacity, resistance and ability to perform heavy duty tasks. The hydraulic system with solenoid valve and direct distributors is especially simple and reliable and controls are extremely practical to use. All models feature an oil cooler with independent thermostat and solenoid valve in order to keep oil temperature within the ideal range and ensure best efficiency. In this way consumption is reduced and components' life extended.

All the numbers of FS100-120

135 cm working width with side brush
